Abstract

1 Goland Keyboard Short-cuts

1.1 Format File

sbift + option + command + f

- Format File

sbift + option + command + f

2 fmt

2.1 fmt.Printf()

- %T - prints the type of the data

2.2 fmt.Sprintf(...,...)

float to string with specifying the number of decimal places.

```
1 s := fmt.Sprintf("%.2f", 12.3456) // s == "12.35"
```

3 byte

The type of *byte* is 'an alias for *uint8* and is equivalent in all ways'. 'It is used, by convention, to distinguish byte values from 8-bit unsigned integer values'.

```
1 // byte is an alias for uint8 and is equivalent to uint8 in all
  ways. It is
2 // used, by convention, to distinguish byte values from 8-bit
  unsigned
3 // integer values.
4 type byte = uint8
```

[1]

4 Networking

4.1 Creating a HTTP Server

```
1  
2 content...
```

5 Neo4j
